

Cashfac Seamless > A SaaS platform for continuous automated operational cash for Pension Administrators

Seamless > is a SaaS solution that delivers hands-free automation to your cash management operations, fast. Whether you administer SIPPs, SSASs, Corporate Schemes, Master Trusts or DB, Seamless > works for you

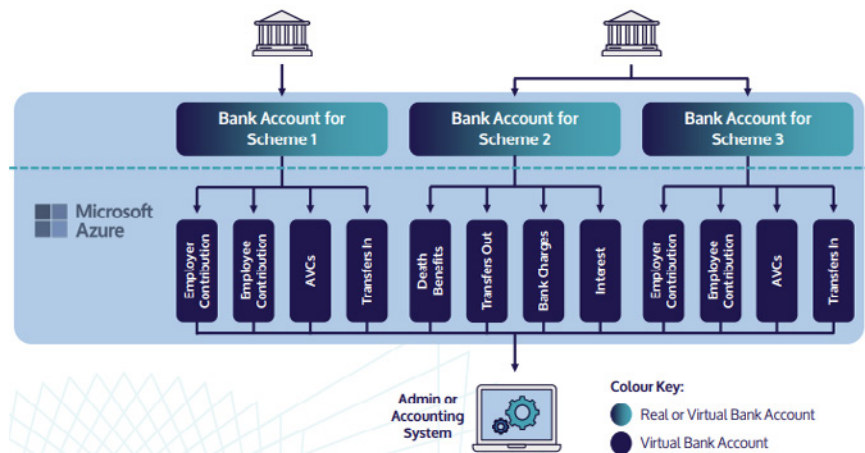

A simplified version of our award-winning digital cash platform specifically designed for Pension Administrators looking for automation, efficiencies and enhanced control in their cash operations. Operations, and a fast route to improved customer service

Seamless > streamlines and integrates banking, reconciliation, cash book accounting and cash flow forecasting, giving you one source of the truth for all scheme cash

Cash is at the heart of pension administration. It is essential to receive, track, pay, reconcile forecast and account for cash. Many firms are relying on manual processes to get the cash in the right place. Back office functions are **manual, expensive and face high levels of risk**

Seamless > takes away the worries and gets the cash in the right place, fast & seamlessly

We integrate your bank data & your internal cash expectations to enable:

- Elimination of double keying by integrating your bank & back office
- Automated outbound payments
- Automated cash book and accounting
- Fully automated cash reconciliations
- An account structure that matches your and your clients' needs

Improved customer service
A One-Stop-Shop cash platform for accounting & admin teams to collaborate and service customer needs better and faster

Operational Efficiency
Eliminate double-keying by integrating your back office to remove clunky Excel cash reconciliations & manual processes

Enhanced risk and control
Automated rules-based controls that reduce risk and allows teams to focus on the genuine exceptions faster

Cashfac Seamless > Transition from high-touch to hands-free cash operations

"We've achieved better cash management, consistent cost savings and easier regulatory compliance across different business units by automating core processes"
